

College of Business Academic Research Seminar

Dr Sheraz Alam Malik

assistant professor of Project & Operation Management at the College Of Business at Al Faisal University Riyadh

Title:

"NO..AI will not take over human learning...not yet"

BIO

Dr Sheraz Alam Malik is an assistant professor of Project & Operation Management at the College Of Business at Al Faisal University Riyadh, Saudi Arabia. He is currently working on multiple projects to critically understand the impact of AI on different business and educational domains

and has published extensively in this area. He currently teaches undergraduate business Analytics and uses different visualisation & analysis software like Tableau, power BI & SPSS

ABSTRACT

AI and its use esp. in human learning is laced with biases. These biases are in different domains starting from historical & representation biases to measurement & deployment bias. These biases which sometimes are baked into its design diminish its utility value in improving human learning. However, literature is littered with hype about the potential

breakthrough this emerging technology will bring in the advancement of human learning without highlighting its critical issues/flaws. These issues have to be discussed in comparison to their intended benefits to show critical gaps both in the concept and application.
